Crime Scene Tripod for UV Viewer

The Crime Scene Tripod works with the UV Viewer to mount and stabilize the viewer. The photograph on the right shows the UV Viewer attached. The tripod breaks down into a compact package and can be assembled in a couple of minutes. No tools are required. All fasteners are captive thumb screws, so you misplacing them is never a problem. The tripod comes complete with two adjustable UV lights. An adjustable scale can be positioned laterally on any side of the triangular base. It is light weight -- constructed from high strength aluminum alloy and is very durable. The UV Viewer (sold separately) attaches to the tripod in seconds with a single thumbscrew.

Weight (with lights):	2.5 lbs.
Height (without UV Viewer):	16 in.
Triangle Span:	12 in.
